With more than 50 years of design and manufacturing experience, Lafert now offer a comprehensive range of Gearless Machines.

The compact design together with the use of reduced sheave sizes allow the machines to be mounted within the hoist way, even in the smallest elevator shafts.

The motors are designed for 24 or 30 poles, operating at low speed providing a significant improvement in comfort. The load range is from 240kg to 1600kg depending on the suspension type. Speeds are available up to 2.5m/s.

- Certified compact double coil and low noise brake which can be used as a safety devise against uncontrolled car movement upwards (EN8 1-1 A3 Amendment)
- Compact and efficient design
- Lubrication free
- No ventilation, quiet lift
- Smooth and comfortable ride

Lafert also offer High Efficiency Asynchronous Motors for hydraulic power units, meeting the requirements of IE2 and IE3 efficiency levels in accordance with IEC 60034-30-1;2014. cURus, Premium Efficiency is also available to meet the North American requirements.
